

Pepe Hurtado García

Tech Lead & Full-Stack Software Engineer

Murcia, Spain (open to remote / relocation) · +34 694 49 84 59 · pepeke2000@gmail.com · linkedin.com/in/pepehurtado · pepehurtado.vercel.app

PROFILE

Tech Lead and Full-Stack Engineer who owns delivery end-to-end: architecture and backend development in Spring Boot/microservices, Angular front-ends with RxJS, and the infrastructure that ships them (Docker, Kubernetes, Jenkins, VPS-to-on-premise migrations). Currently leading multiple concurrent client engagements, combining hands-on technical ownership with direct client requirements gathering and team coordination. Track record of modernizing legacy platforms, executing complex database migrations, deploying AI-driven automation, and improving application performance and reliability.

CORE COMPETENCIES

Backend: Java, Spring Boot, Spring Security, .NET Core, REST API design, microservices architecture

Frontend: Angular, RxJS, React, Vue.js, TypeScript, JavaScript, HTML/CSS, Tailwind

DevOps & Infrastructure: Docker, Kubernetes, Jenkins, Nginx, GitLab CI/CD, VPS-to-on-premise migrations

Data: MariaDB/MySQL, PostgreSQL, JPA/Hibernate, schema migrations, query optimization, triggers & stored procedures

Security: JWT, OAuth2, LDAP

Web & SEO: Technical SEO, sitemaps, Google Search Console, site indexing, web performance optimization

AI & Automation: RPA design, local LLM deployment, conversational AI (WhatsApp / voice channels)

Leadership: Technical leadership, client requirements gathering, team coordination, agile delivery

PROFESSIONAL EXPERIENCE

AUNNA IT

Technical Lead & Full-Stack Developer

Murcia, Spain

May 2024 – Present

- Act as technical lead across several concurrent client engagements, serving as the main point of reference for architecture, design and problem-solving across backend and frontend.
- Design and build highly configurable, scalable REST APIs with Spring Boot, ensuring quality, performance and clear architecture.
- Own complex database lifecycles: schema migrations, performance tuning, and integrity via triggers and stored procedures.
- Develop and maintain full Angular front-ends, applying RxJS for reactive state and dependency management.
- Apply automated and manual testing across the stack to catch issues early and safeguard reliability.
- Lead client-facing requirements gathering, translating business needs into clear specifications and task breakdowns for the development team.

Key Contributions by Area:

- Legacy Modernization & Data Migration:** Progressively took over technical and client ownership on legacy platform modernizations, executing full database migrations to redesigned schemas and entity models without disrupting live operations.
- Microservices, APIs & Systems Integration:** Designed and built multi-service Spring Boot backends, integrating external third-party APIs and interconnected microservices into cohesive, scalable platforms.
- Infrastructure & DevOps:** Led infrastructure migrations from VPS to on-premise environments, managed CI/CD pipelines through Jenkins and Kubernetes, and maintained Docker/Nginx-based production deployments.
- AI & Automation:** Delivered a conversational AI product across messaging and voice-call channels with a self-hosted local LLM and a real-time statistics dashboard; led the evolution of a voice-recognition scheduling system to an AI-based flow while preserving all existing logic; designed an RPA solution to automate testing and validation processes.
- Client & Team Leadership:** Own client-facing requirements gathering and roadmap planning across multiple concurrent engagements, translating business needs into clear technical specifications and task breakdowns for the development team.

Across all engagements: consistently optimized processes, database queries and application performance, and implemented activity monitoring.

Self-Employed

Spain · Remote

Freelance Software Engineer

February 2025 – Present

- Design, build and deploy custom software solutions end-to-end for independent business clients, in parallel with my Tech Lead role at AUNNA IT.
- Deliver bespoke websites and web applications — booking/scheduling systems, content-managed sites, e-commerce — covering front-end, back-end and deployment.
- Design automation workflows that remove repetitive manual work for clients, from appointment and review management to day-to-day operations.
- Own technical SEO for client projects — sitemaps, structured metadata and Google indexing — to ensure visibility from launch.
- Select and integrate AI features chosen for real business value (search, matching, conversational tools) rather than as a marketing add-on.

SmartWay Studio S.L.

Murcia, Spain

Full-Stack Developer

October 2023 – February 2024

- Delivered new features for a large-scale national platform based on specific client requirements.
- Built reactive forms with digital-signature capture and database integration.
- Implemented JWT-based security and new API endpoints.
- Collaborated closely and effectively with the development team.

EDUCATION

University of Murcia

Murcia, Spain

Degree in Computer Engineering

CERTIFICATIONS & COURSES

- UX Design course
- Udemy — Microservices & REST APIs with Spring Boot, OAuth2 and Docker (full course)
- Udemy — Angular: From Zero to Expert (full course)
